OIPE JC1
MAR 29 2004
PATENT & TRADEMARK OFFICE

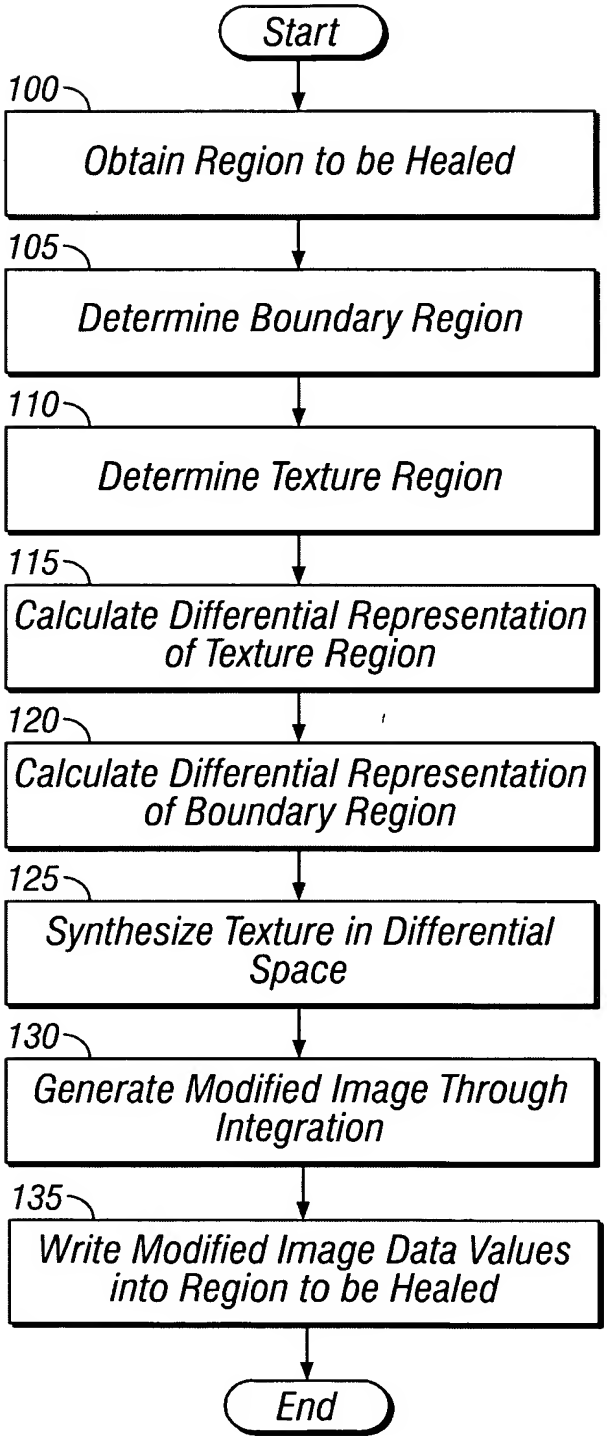

FIG. 1

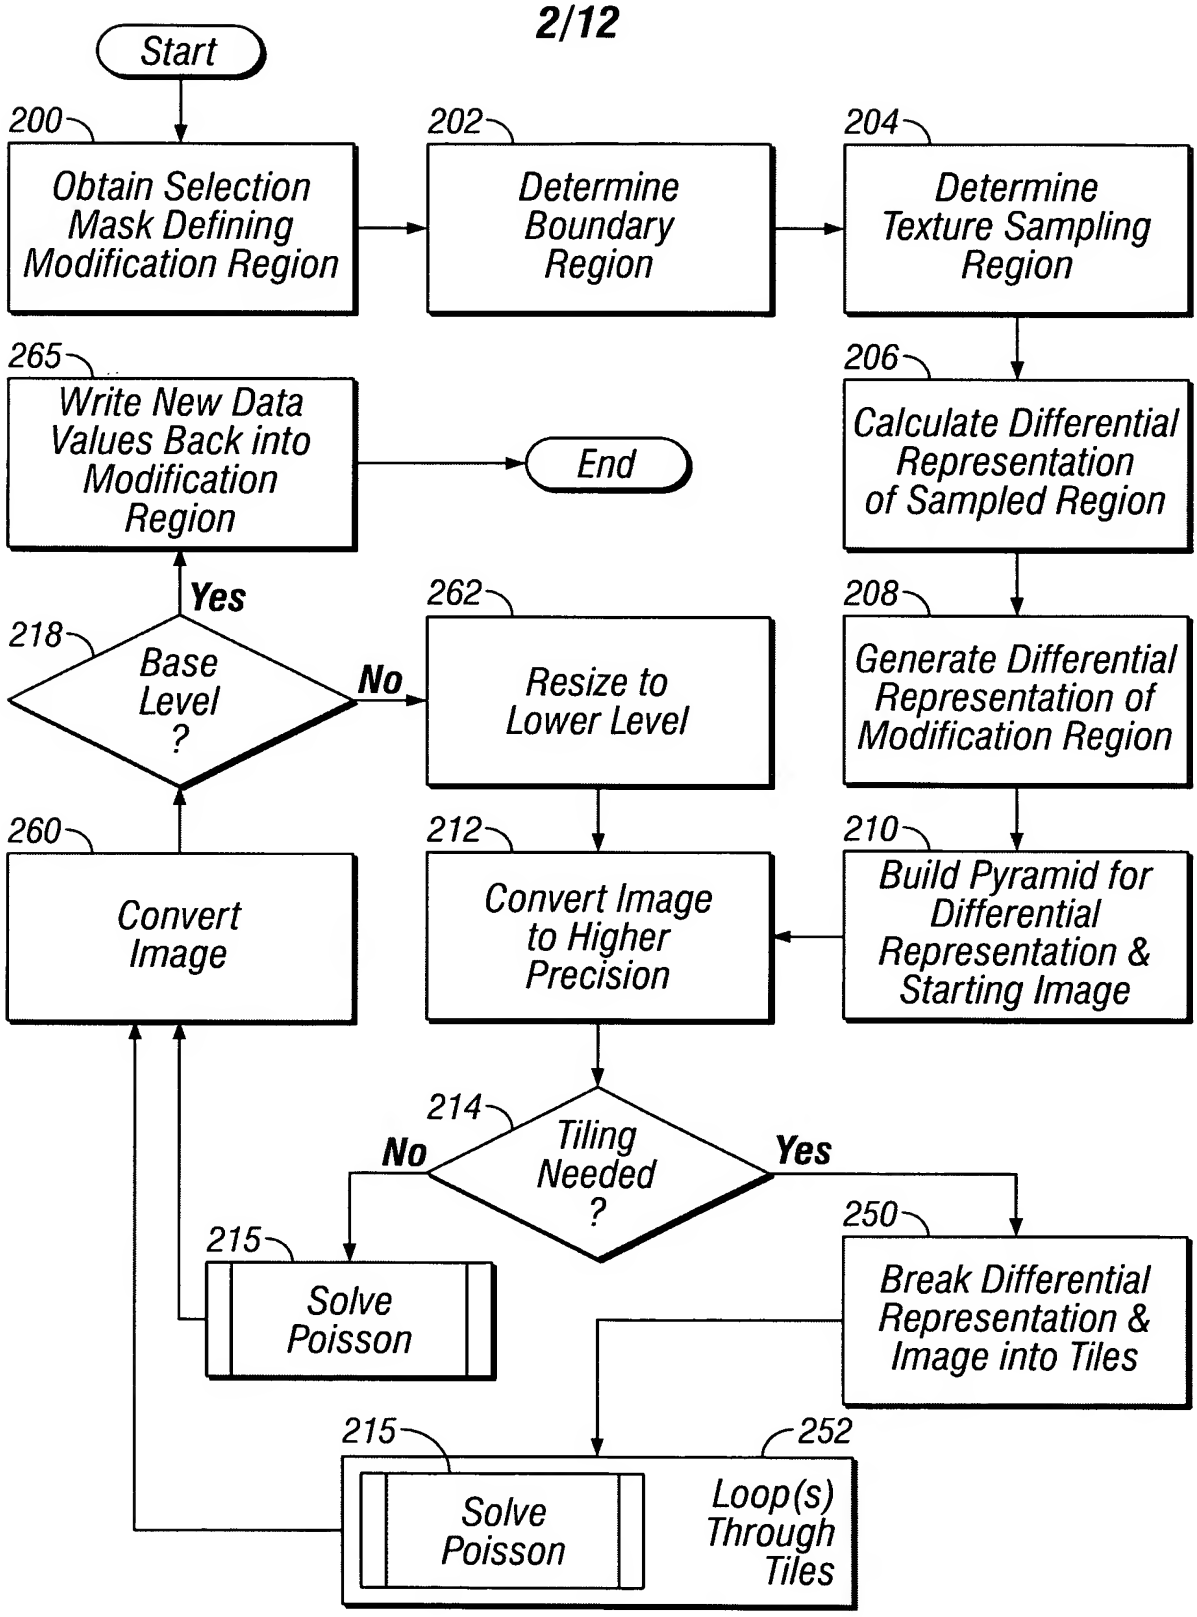
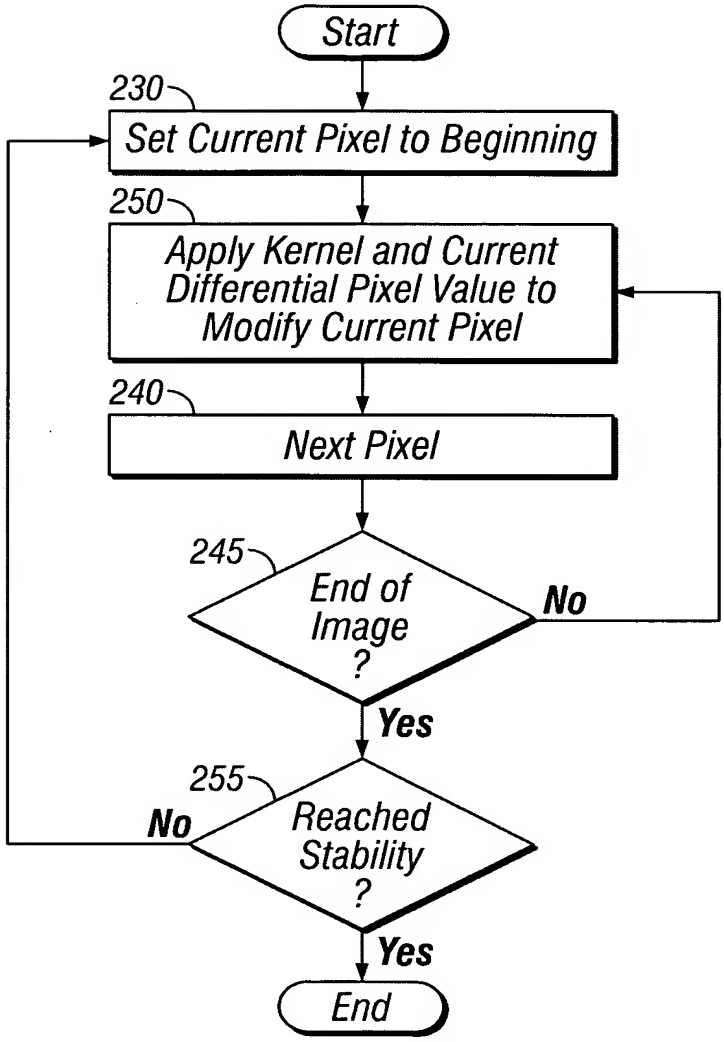


Start
200
Obtain Selection Mask Defining Modification Region
202
Determine Boundary Region
204
Determine Texture Sampling Region
206
Calculate Differential Representation of Sampled Region
208
Generate Differential Representation of Modification Region
210
Build Pyramid for Differential Representation & Starting Image
212
Convert Image to Higher Precision
214
Tiling Needed ?
No
Yes
215
Solve Poisson
250
Break Differential Representation & Image into Tiles
215
Solve Poisson
252
Loop(s) Through Tiles
260
Convert Image
218
Base Level ?
Yes
No
262
Resize to Lower Level
265
Write New Data Values Back into Modification Region
End

FIG. 2A



Start
230
Set Current Pixel to Beginning
250
Apply Kernel and Current Differential Pixel Value to Modify Current Pixel
240
Next Pixel
245
End of Image ?
No
Yes
255
Reached Stability ?
No
Yes
End

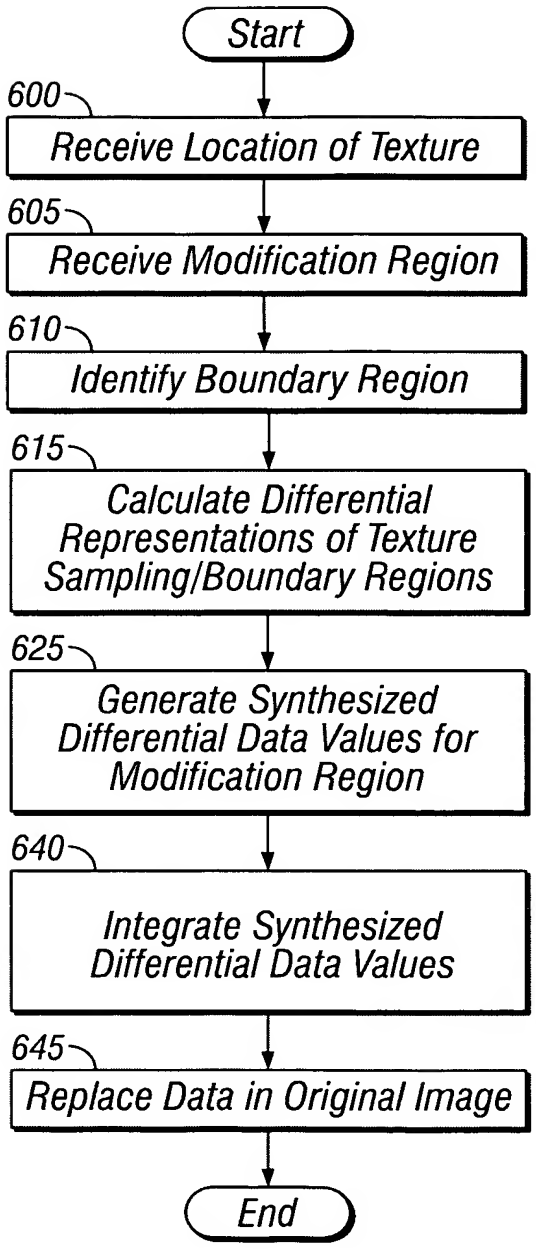
FIG. 5

7/12



Start
600
Receive Location of Texture
605
Receive Modification Region
610
Identify Boundary Region
615
Calculate Differential Representations of Texture Sampling/Boundary Regions
625
Generate Synthesized Differential Data Values for Modification Region
640
Integrate Synthesized Differential Data Values
645
Replace Data in Original Image
End
